

# Aarush Goradia

aarush.goradia@princeton.edu | 609-255-3181 | [aarushgoradia.com](http://aarushgoradia.com)

## EDUCATION

### Princeton University

May 2027

B.S.E. in Electrical and Computer Engineering, Minor in Computer Science & English

Cumulative GPA: 3.69

Relevant Coursework: Contemporary Logic Design, Programming Systems, Data Structures and Algorithms, Advanced Circuit Design, Computer Architecture, Machine Learning, Probability and Stochastic Systems

## SOFTWARE & HARDWARE EXPERIENCE

### Technology Development Intern, Advanced Micro Foundry, Singapore

June 2025 - Present

- Developed a Python & C++ based program to automate preliminary checks on GDS files for fabrication requirements, transforming a previously manual process and reducing review time from hours to minutes.
- Rewrote core GDS analysis routines in C++ to reduce execution time by 15–20× over prior Python implementations.
- Built interactive wafer optimization scripts in Python using Jupyter to maximize die count based on configurable layout parameters.
- Integrated automated DRC and validation routines into tape-out workflows, collaborating closely with engineers.

### Head of Embedded Systems, Princeton Rover Team, Princeton, NJ

September 2024 – Present

- Design, prototype, and build a Mars rover to compete in the University Rover Challenge 2025.
- Programmed the 915 MHz and 2.4 GHz communications systems between the base station and the rover.

### Independent Researcher, Sengupta Lab, Princeton, NJ

August 2024 – May 2025

- Scripted (Python) & simulated transformer layouts in Cadence Virtuoso to create a synthetic geometry-performance dataset.
- Trained a 3-layer 32-neuron multi-layer perceptron neural network using Python to predict transformer geometry from lumped parameters with 90% accuracy.
- Wrote a Python algorithm to automate cascaded transformer-based low-noise amplifiers using the model's predictions.
- Authored two research papers detailing transformer layout simulation, model training pipeline, and LNA synthesis automation; each received an A from faculty reviewers.

### AI Engineering Intern, AI Seer, Singapore

May 2024 - July 2024

- Designed and implemented a modular fact-checking pipeline in Python using LangChain Agents and external API integrations, boosting accuracy from 85% to 92%.
- Built a live-stream transcription system with real-time speaker diarization and punctuation, using whisper in Python.
- Presented results to Singapore's Minister of Communications; contributed to U.S. Patent Application No.: 19/011,265.

## TECHNICAL PROJECTS

### FixedPointDSP

July 2025

- Built a header-only fixed-point C++ library with customizable overflow policies using modern type-safe design.
- Implemented FIR filters, dynamic coefficient generation, DFT, FFT, and convolution support.
- Achieved 100% test coverage with GoogleTest; benchmarked FFT with GoogleBenchmark to confirm  $O(n \log n)$  complexity.

### GreenCycle

November 2024

- Collaborated with a Hackathon team to develop an app that matches users with nearby recycling centers based on net profit.
- Developed frontend with HTML/CSS/JS and backend logic in Python using LangChain.

## SKILLS

**Programming Languages:** Advanced in Python, Java; Intermediate in C, C++, Verilog

**Frameworks & Tools:** LangChain, GoogleTest, GoogleBenchmark, Whisper, Jupyter, NumPy, Matplotlib, Git, Linux CLI

**Design Software:** KiCAD, AMD Vivado, NX Siemens, Cadence Virtuoso, Cadence EMX, KLayout

**Languages:** English (Native), Chinese (Fluent), Hindi (Intermediate), Gujarati (Speaking Fluency)
